

CONVENIENT, COMPACT THERMOMETER

Temperature on the go.

The Infrared Thermometer is a great tool to quickly take in-duct, ambient, and register temperatures. It's a handy tool to assess a system and it fits conveniently in your pocket. The ROD has a sharp, narrow tip to easily insert into duct work, and the hanging hooks allows you to take hands-free measurements. The bright back lite display flips between the IR and ROD measurements so readings are always easy to view. Plus this handy tool quickly calculates T1 – T2 across both the IR and ROD modes, or a combination of the two.

Folding ROD Thermometer, SPK3

- Great to quickly assess a system
- Folding ROD for in duct measurements
- 8:1 IR for register and ambient temps
- Hands free in-duct measurements
- Quickly calculates T1 – T2 across both ROD and IR
